## Introduction.

---

WHEN the business of a firm increases as ours has done, it shows conclusively that our policy, our methods, and dealings with our friends and patrons have been such as to meet their approval. The result of our policy has been a vastly increased list of satisfied customers, as well as a vastly increased business for ourselves.

In presenting this Price List we are pleased to state that we do so with the consciousness that the stock we are quoting herein is absolutely the best obtainable, for we confine ourselves to a comparatively limited number of specialties and are able to devote all possible care and attention to them.

The owner, FRANK A. QUINETTE, is entering upon the eighth year of management, and has increased his stock to many times what it was when he assumed control. His twenty-five years of experience and practical training has given him thorough knowledge of trees, and is undoubtedly of the greatest value in the production of stock upon correct principles and in keeping it free from injurious insect pests or dangerous diseases.

Our future will be conducted on the same principles as the past—to produce the best possible stock of such varieties as have real merit, to exercise every precaution to send out stock true to name and variety, to give an honest dollar's worth for every dollar received, and to place ourselves in the lead of all up-to-date nursery companies of the South. We have the acreage, the stock the knowledge, and we are rapidly acquiring the trade. Our business principles are sound.

NINE-MILE POINT NURSERIES.

## Terms of Business.

---

**Location and Shipping Facilities.**—We are ideally located opposite the City of New Orleans, on the Mississippi River. Through our estate run the Southern Pacific Railway and the Texas Pacific Railway, besides which the nearness of New Orleans itself makes it possible for us to ship over any railroad in Louisiana or express company desired, as well as by boat or steamship.

New Orleans is our Freight, Express and Telegraph Stations. We have a city office and salesroom in New Orleans.

We have no connection with any other nurseries. We are responsible only to those who deal directly with us through our offices.

**Terms Cash** with order, if for immediate shipment. Orders for shipments to be held for some time after shipping season opens should be accompanied by cash payment in full. Orders booked in advance of shipping season must be accompanied by 25 per cent, and balance remitted when stock is to be shipped. We do not care to ship trees C. O. D.

**Remittances.**—In order to secure prompt shipment, remit by Bank Draft, Express or Money Order or Registered Letter.

**Method of Shipping.**—Please exercise care to write name and address plainly, giving street number, city or town and State. We do not make extra charges for packing or boxing. We deliver goods F. O. B. New Orleans to any Railroad or Express Company, or Steamboat or Steamship Company.

**Transportation at Purchaser's Risk and Expense.**—All transportation charges are to be at the purchaser's expense, and our responsibility ceases on delivery in good condition to the forwarding company. All claims for loss or damages must be made upon them.

If goods are delayed, notify us at once, and we will immediately

get out a tracer and assist the purchaser in finding the goods, if possible, and use every means at our command to secure the prompt delivery of goods; also to secure recovery in case of damage or loss.

**Shipment.**—All shipments are made promptly on receipt of orders, and are properly packed so as to reach you in good order.

**Substitution.**—We do not substitute unless authorized to do so. We desire to follow customer's wishes in this respect. Kindly express them.

We guarantee all stock to be in absolutely first-class condition, well rooted, well grown, true to name and properly packed and shipped according to shipping instructions.

**Claims.**—All claims against us will be rectified if they are justifiable and if we are at all responsible for them; however, such claims must be made within ten days from receipt of goods.

No claims entertained for more than the original cost.

## A Few Hints About Tree Planting.

---

Set stake where the trees are to stand. Make the rows straight. The orchard will look better, and the trees will be easier to care for.

Dig the holes deeper and wider than the spread of the roots.

When trees are received, open the boxes or bales and heel the trees in a shady place. Dig out a trench straight down on one side, sloping out to the ground level on the other, and deep enough to hold the roots of the trees. Place the trees in the trench side by side, cover the roots with earth and pack well around them.

Trees should not be left long, and are best heeled in only during the time of planting. *Do not allow roots of the plants to be exposed to the sun or wind at any time.* Keep them covered.

Prune off broken roots and cut back the tops, if they have not already been cut back. Trees will start off much better if well pruned at time of planting.

*Set trees at the same depth they stood in the nursery rows below the surface.* The earth-marks on the collar can be taken as a guide. Use top soil for filling in the holes. *Pack the earth tight around the roots.* A pound of good commercial fertilizer thoroughly mixed in the earth with which the holes are filled can be used to good advantage.

If soil is dry, water may be used to advantage—a bucketful or more. Apply the water when the hole is three-quarters filled in. When the water has sunk away, fill in the remainder of the hole with earth, pack well and rake the surface, to leave the earth loose on top.

Citrus trees planted early should be banked with clean, dry soil about the buds, to protect them against cold. In dry weather it is an excellent plan to bank the trees with soil. They will grow off better.

### Citrus Fruits.

The Trifoliata has, during the past few years, attracted much attention from orange growers, particularly in the South, from Florida to Texas. Its value as a stock for other citrus varieties, as well as for hedging, has been substantially determined. It is the hardiest of all Citrus, hence varieties grafted on it are able to endure more cold than those grafted on other stock.

It is a native of Japan, where it grows wild. The Japanese long ago used it for stock for other Citrus. It is deciduous, has dark, glossy, green trifoliolate leaves, and is heavily studded with thorns. It bears young, in four to six years, from the seed, but its fruit is inedible. It is generally regarded as a rather small tree, and varieties grafted to it do not attain a very great height.

Orange trees grafted to Trifoliata stock usually attain a height of 10 to 12 to 15 feet, and measure about three to four inches in diameter.

There is no tree of the Citrus family that can stand more neglect, more exposure to extremes of temperature, or the excesses of moisture and dryness, heat and cold, as well as the Citrus Trifoliata. It is hardy as far North as New York City. It is absolutely frost-proof.

## Orange Trees.

Washington Naval Oranges.

Any of the following varieties of Citrus Fruit on healthy Citrus Trifoliata stock at the following rates:

LOUISIANA SWEET  
WASHINGTON NAVAL  
IMPERIAL BRAZILIAN  
MEDITERRANEAN SWEET

## Pecan Trees.

### PLANT PECANS.

..

If you wish to own an auto  
That will travel fast and far.  
If you have a dear desire  
For a splendid private car  
Plant pecans.

If your daughter yearns for jewels  
That will make a lurid blaze,  
Or your wife would be a leader  
Where some other matron sways.  
If you wish to give up toiling  
And in comfort spend your days,  
There's a way—don't overlook it—  
Plant pecans.

If you are sick of serving others  
And are looking for a change;  
If you wish to gaze at wonders  
That are far away and strange,  
Plant pecans.

If your son would squander money  
On a chorus girl;  
If you wish to own a castle  
Having walls inlaid with pearl;

If your darling daughter wishes  
To be married to an earl,  
There's a way—don't overlook it—  
Plant pecans.

If within the Senate chamber  
You would like to hold a seat;  
If you wish to be untroubled  
By the rising price of meat,  
Plant pecans.

If you wish to get from under  
The big burdens which you bear;  
If you wish to go to Wall street  
And create a furore there;  
If, in short, you have a longing  
To become a millionaire,  
There's a way—don't overlook it—  
Plant pecans.

**Our Seedling Pecan Trees  
have more than paid the taxes  
on our nurseries for a number  
of years past.**

Of the many horticultural products which are adapted to our South-land, the Pecan is attracting the greatest attention, both from the small planter and the capitalist.

The Pecan Nuts at present found on the general market are from the wild trees growing in Louisiana and the Mississippi Valley, and are, for the most part, small and of inferior quality. The trees that are being so extensively planted in the South are of greatly improved varieties and yield nuts far superior to the ordinary Pecan. The nuts are large, thin-shelled, and filled with meat surpassing in flavor and quality that of any other nuts. There are comparatively few of these fine varieties, and these have been secured from careful selection of the best, obtained from a great many trees grown from selected seed.

Out of the vast number of bearing grafted trees in existence there are perhaps not more than twenty-five that are considered of sufficient merit to warrant propagation. Of these, it may be safely said, not more than a dozen are worthy of extensive planting. The perfect variety is yet to be

Cluster of Grafted Pecans,  
which retail at \$1.00 per pound.

discovered or introduced by the plant-breeder. However, there are a number of varieties which are recognized as standards, and one can safely plant these, knowing the fruit will always find a market at fancy prices.

THE PECAN AREA embraces, in general, that section of the United States lying south of the 36th parallel. It is true that trees are found north of this, but for extensive planting a more southern location is recommended. Little attempt has been made to grow the Pecan on the Pacific coast, yet, unquestionably, there are areas in this section where Pecan production is feasible.

AS AN INVESTMENT, Pecan culture offers greater attractions than any line of horticulture. The outlay per acre is not great, crops are sure, easily harvested, and may be gathered and marketed at leisure, when prices

are favorable, because, unlike most fruits, Pecans are not immediately perishable. The land between the trees can be used for growing ordinary crops until the trees come into profitable bearing, thus greatly reducing the cost of the grove. With good management it is possible thus to secure a grove in addition to other profits. After the trees come into bearing the cost of maintenance is much less than for other fruits.

THE FRUITING AGE of a Pecan tree depends on variety, character of soil, and the care given. Where proper conditions prevail, a budded or grafted tree should bear the fifth season after planting. Some of our trees fruited the third season from planting, but such conditions cannot be expected on a large scale. Under favorable conditions, profitable returns are to be had at eight years from planting.

THE YIELD for the first three years after beginning to bear will vary from a few nuts to several pounds per tree. This is a matter that largely depends upon the planter. At the time of writing this, the trees are loaded with fruit, and many young grafted trees give promise of excelling some of the most liberal estimates made. At least half of our nine-year-trees are set with fruit, although they have been severely cut for budwood each season. Trees planted upon good soil, properly fertilized and cared for, may be expected to produce 15 to 25 pounds at nine to eleven years from planting. This is a low estimate, but we prefer to under-estimate rather than over-estimate the yield. The rate of increase after bearing is rapid. From a Frotcher tree planted nine years we gathered 14 pounds, that sold at \$1.00 per pound. A number of six-year trees produced a pound each. A seedling tree in this locality, twenty-three years of age, produced over 600 pounds in one season, and the same tree yielded 1,400 pounds in three years, or a return of more than \$280. Our seedling trees pay our taxes every year.

THE PRICE OF PECANS has been steadily advancing for a number of years. Ordinary Pecans brought from 15 to 25 cents, while the fine varieties brought from 50 to 75 cents. We feel confident that a first-class nut will always find a ready market and will not sell at less than 50 cents per pound wholesale.

THE VALUE OF GRAFTED or budded trees, as compared with seedlings, is so well known at this time that reference to this is hardly necessary. However, we will say that time has proved that there is so much uncertainty as to the time of bearing and the character of nuts of seedling trees, that no one can well afford to plant them. As to which is the more desirable, budded or grafted trees, there has been some difference of opinion. We have given this matter much study, and find in some particulars a budded tree is preferable, while in other features a grafted tree is to be preferred. From careful observation, we consider one just as desirable as another, if good trees of each class are used.

AS A FINAL SUGGESTION, let us say, plant the very best tree you can afford. You are planting not only for yourself, but for future generations, since a Pecan tree will stand for a century or more. If a good tree is planted it will stand as a monument to the planter's forethought and

judgment. If an inferior or stunted tree is planted and neglected, it will occupy good space for years, and perhaps then succumb to the ravages of its foes without ever being of any benefit. We do not claim to be the only ones sending out good Pecan trees, but we do claim to send only such as have been grafted to best varieties obtainable, and whose results we know are bound to suit. We offer only the best budded and grafted trees.

(Boston, Maiden Hair, Asparagus,	in pots, medium		
Spengeri, Asparagus Plumosa)	sizes. . . . .	\$ .50	\$1.00
	Large sizes . . . . .	1.50	2.00

Plant them in rows 50 ft. each way, and use the space between to raise any other crop. While working your crop, you are benefiting your trees and they are costing you nothing. They are self-supporting, and the first two crops of Pecans will more than pay for the trees. Each year afterward they simply return to you a handsome profit on the original investment.

They grow while you sleep. They are workers for you and put money in your pocket. Stop and consider the wonderful opportunity. Don't miss it, you'll never regret it. Plant a grove.

**WE OFFER YOU THE TREES, GRAFTED TO THE BEST PAPER SHELL VARIETIES:—**

3 to 4 ft., @ \$1.00 each .....	2 yr. old
4 to 5 ft., @ \$1.25 each .....	3 yr. old
5 to 6 ft., @ \$1.50 each .....	4 yr. old
6 to 7 ft., @ \$2.00 each .....	5 yr. old
7 to 8 ft., @ \$2.50 each .....	6 yr. old

**WE CAN FURNISH ANY OF THE FOLLOWING VARIETIES:**

**FROTCHER EGG SHELL,**

**SUCCESS,**

**STUART,**

**NELSON,**

**PABST,**

**VAN DEMAN,**

**AUDUBON,**

any of which are absolutely choice varieties, whose prices will bring from 75c to \$1.50 per lb. for the fruit.
